APRIL 2019

Judges Choice - March - Bulbophyllum grandiflorum

This is a plant I purchased from the lovely Judy Robbins about 12 months ago. Bulbophyllum grandiflorum (and all the other species in the Hyalosema section) flower from old growth along the stolon, so they need to be quite mature to produce any flowers. It was already a fairly large specimen when I acquired it and since I knew it would be a while before a seedling would get to flowering size, I jumped at the opportunity. These plants are very rewarding as the flowers can last up to two weeks, which is a long time for Bulbopyllum and will keep throwing spikes for up to three months. Like most Bulbophyllum, Bulb. grandiflorum requires quite a lot of water. I grow it in bright shade and feed with CalMag Finisher every week. I strongly believe that everyone should have at least one Bulbophyllum in their collection as they are often unusual and vary enormously across the many sections. **Steve**

No news from the Secretary this month, Alison & Alan have been down and out with a particularly bad dose of the flu, they are both on the mend, the message: is get your flu shots

FROM THE PRESIDENT

April, the month of showers, shows, sausage sizzles and slugs! (See photo). I can add sickness to this list, as there has been an early 'flu attack here on the Coast.

While enjoying a coffee and enjoying the garden that was looking better as a result of the rain and cooler days, this monster caught my eye as it was slithering up the tree. Apparently, no self-respecting kookaburra or magpie would touch this beastie. I am encouraging the birds that visit our garden to tackle the elimination of the dreaded Dendrobium Beetle (without any success so far), but as for slugs.......

The first Orchid Show for this year had us hopping and many thanks to our very organized Secretary, Alison, who rose from her sick bed to produce labels and collect the necessary items so we could put up the Nambour display at the Sunshine Coast Orchid Society Autumn Show. Our display won second place and several of our members collected various prizes for their orchids and foliage including George and Helena who were awarded Champion Foliage for a massive maidenhair fern that was in pristine condition. Well done everyone!

Our Display at Caloundra

The last sausage sizzle was a very busy day and the cooks were thankful for the cooler weather I am sure. This time we were missing Secretary Alison, Stalwart Alan and Treasurer Jean who were all suffering from the dreaded Lurgi. We managed to get through the day although they were sorely missed! May thanks to all who helped.

I hope you are all getting or have already received your flu shots. Your orchids will thank you for not sneezing on them! To all our members who have had the misfortune to fall ill or have been hospitalised, I wish you a speedy recovery.

And remember:-"The chance of a grower getting an even break in a show depends on what the orchid hits as it falls over in the car" (From "Orchid Wise" by Roger Rankin).

Joan Raabe receiving Honorary Life membership from Alison for her catering expertise at our meetings and shows. Joan is always available to assist us at every event where catering is required. Thank you Joan for your many years of dedication to the society.

Richard Hand receiving his Honorary Life Membership from Gina at our March meeting for his 13 years dedication to the society. Richard is our go to man for many duties for the society including Show Admin,

Webmaster & IT issues, Editor, Meeting Photographer and Fund Raising Supporter. Well done Richard and thank you for all you do.

<u>Wondai</u>

Judy receiving her award for Champion Species

This was the 26th year that the South Burnett Orchid Society has staged a show. For orchid growers and gardeners alike the Orchid show held in the RSL club and the Garden Expo which takes place in the showgrounds, makes a great weekend outing at Wondai. Congratulations to our members who took orchids to the show and won a few ribbons and to Judy who won Champion Species. Your support of the Sth. Burnett Orchid Society is much appreciated and the President, Linda Olsen, expressed her thanks on behalf of their club, to all who participate

Heat Stress On Your Orchids

By Susan Jones

Like people, orchids, especially those that prefer cooler, shadier environments, can suffer from heat stress during the hot summer months. The midday sun is intense, especially during the summer, and the high temperatures that bright sunshine brings can burn your orchids quickly, especially the more sensitive types such as phalaenopsis, pleurothallids, paphiopedilums and miltonias.

Heat stress is a condition that occurs in orchids and other plants when excessive heat causes an imbalance in transpiration, the process by which moisture evaporates from the plants tissues. When that rate of evaporation exceeds the pace at which moisture is being replaced through water taken up by the orchids roots, the plant becomes dehydrated — leaves become soft and wilted, pseudobulbs wrinkled and ridged. The instinctive response in this situation is to overwater the orchid to correct the dehydration. This can instead make matters worse by rotting the plant's root system, further hampering its ability to take in much-needed hydration. The roots can only absorb so much water at one time. In addition to watering, control of heat and humidity play a significant role in the prevention and management of heat stress.

Placing a mounted plant in an empty clay pot can help retain moisture around roots. The microclimate of higher humidity helps prevent heat stress and aids stressed plants in recovering.

Signs of Heat Stress, these symptoms may appear singly, even in otherwise fairly healthy orchids. When they appear in combination, however, it is usually an indication of heat stress or an underlying problem (such as root loss) that has led to heat stress.

Too much light causes a plants chlorophyll to deteriorate, which can turn your orchid an anaemic yellow-green, and eventually cause premature loss of leaves. Most healthy orchids receiving appropriate light levels will be a robust light green.

Withered Leaves

The culprit, especially in summer weather, can be overheating. If your plant's leaves feel warm to the touch, they could be getting too much light, and need increased air circulation and shading, or a move to a more protected area.

Sunburn

Initial signs of sunburn, as in humans, appear as a reddish-purple tint or freckles on leaves and pseudobulbs. In advanced stages, leaf tips and roots may brown, flowers drop, buds blast or flower spikes fail altogether.

Shrivelled Pseudobulbs

Your orchids pseudobulbs serve as its water-storage organs, so shrivelled pseudobulbs indicate a dehydrated orchid – it is in a stressed state, having used up its moisture reserves.

Leathery Leaves

This goes beyond mere wilting, and occurs in the advanced stages of heat stress, indicating severe desiccation and possible damage on the cellular level. Depending on how long the condition has persisted, the type of orchid and its overall health aside from the leaf damage, it may or may not recover once its leaves are parched. Mounted orchids are particularly sensitive to higher temperatures and require additional water and humidity during hot weather.

.

Mounted orchids are particularly sensitive to higher temperatures and require additional water and humidity during hot weather. This Cattleya hybrid exhibits the yellowing leaves and wrinkled pseudobulbs typical of heat-stressed plants.

Prevention

Your orchids need lots of attention during the summer months, especially on hot days. With higher temperatures, orchids require more frequent watering to prevent dehydration. High temperatures quickly dry out mounted orchids, those in baskets and even potted plants.

Maintaining the balance between keeping orchids sufficiently hydrated and over-watering can be a challenge. A simple rule of thumb is that an orchid's need for water increases and decreases with the ambient temperature, so water thoroughly and more frequently during higher temperatures. Most mounted plants and those in baskets, especially vandaceous orchids and other genera grown with little or no media, will benefit from daily watering in warmer weather.

In addition, keep humidity high and air movement continuous, as both of these factors help plants keep their cool on hot days. Adding a fan to the growing area, or locating your orchids where they receive the caress of summer's breezes, as well as spacing your plants to allow for sufficient air circulation between orchids, can make a big difference in their environment and overall health. This will also help to keep rots from fungi and bacteria at bay. The benefits from misting orchids during hot weather do not have much sustained effect, so unless one has a misting system in place to maintain that added humidity throughout the day, it is probably not useful to your plants. When watering or misting, always be certain that plants have ample time to dry before night falls, so as to discourage bacterial and fungal growth. When moving orchids outside for the season, start them out in a shaded spot and gradually increase their exposure to sunlight to acclimate them to the higher outdoor light levels. Make sure to protect them from the strongest sunlight as midday summer sun has more intense UV rays that can burn tender plants. Check the amount of exposure your plants receive at different times during the day as the sun moves and throughout the year as the earth's orbit around the sun makes its gradual seasonal changes, which in turn changes the angle of the exposure your plants receive.

For greenhouse growers, consider using shade cloth for added protection during the summer months. Windowsill growers may want to add a sheer curtain during the summertime to keep sunlight reflected by the window glass from causing sunburn. Finally, always have someone care for your orchids while you are away on summer vacation.

Treatment

Once an orchid has suffered the effects of heat stress, it may take a long time to rebound. Apply fertilizers sparingly, using a weak solution, and flush the growing medium with clean water between applications of fertilizer, as the salts in fertilizers are difficult for dehydrated plants to assimilate, and a regular dose may further burn the plant. Be especially alert for pests on distressed orchids — insects and viruses are more likely to attack weakened plants.

(Thanks to the American Orchid Society for this interesting piece.)

A selection of members plants at the March meeting.

Bulb. graveolens x frostii - Jenny.

C. Caudabec Candy - Charlie & Gina

Cattleya uknown - Gabrielle

Den. bigibbum var. superbum Judy

Miltonia Earl Dunn - Rod & Jan

Odtna. Mem. Martin Orenstien 'Lulu' - Col & Marilyn.

Paph. Crossianum - Marty & Anita

Rlc. Village Chief North Marty & Anita

Cattleya labiata - Beryl & Graham

Den. Burbank Premium Bert & Merlyn

Phaiocymbidium Chardwarense Rod & Jan

Trichoglottis atropurpurea
Rod & Jan

Vanda Precious David & Lorraine

Species

Judges choice - Dendrobium bigibbum var superbum

This is Queensland's floral emblem, and this variety grows in Northeastern Queensland from Cooktown to Font Hills west of Mount Molloy at elevations from 5-350 m.

Please refer to our March 2019 newsletter for detailed information about these orchids supplied by David Hunter.

I grow this plant in a mix of bark, charcoal and perlite in the

smallest pot I can fit the roots into. It is given a very small amount of Plantacote High K controlled release fertiliser in mid spring and weak foliar fertilisers until mid autumn, then just light misting until mid spring. Various fungicides and pesticides are applied all year round. It is grown under 70 percent shadecloth with solar weave added over the colder months. **Judy**

Orchid of Botanical Interest - Acineta densa

I bought this plant at the Triennial at Kawana Waters in 2016 from Orchid Species Plus as *Acineta chrysantha*. It has now been identified as *Acineta densa*. At the time it had only grown one new lead at a time. It takes about three years to mature a lead. After it flowered in 2017 in early March, it produced four new leads. A year later each of these produced a new lead. Looking at how it has grown and reading about how it can grow I will be giving it more nutrient in future. After the flowers have gone I will repot it into a hanging basket as the number of bulbs soon outgrow a pot. The type of pot to accommodate the downward inflorescence is limited in size. It is related to *Stanhopeas* and comes from Southern Central America, possibly at some elevation as it did not like our hot summer.

Duncan

Rods Zootrophion atropurpureum received the cultural award

Species get together was held at Rod & Jan's place, a great afternoon as usual, the weather looked threatening but held on long enough

Acineta densa, Ancistrochilus rothschildianus, Arundina graminifolia, Pescatoria ecuadorana, Bulbophyllum annadalei x2, Bulbophyllum corolliferum, Bulbophyllum digoelense, Bulbophyllum, grandiflorum, Bulbophyllum melanoglossum, Bulbophyllum sanguineopunctatum, Bulbophyllum sinapsis, Cattleya dormaniana x 5, Cattleya pumila, Coelogyne ovata var alba, Coelogyne rochussenii x 2, Coelogyne usitana, Dendrobium bigibbum var superbum x 2, Dendrobium bigibbum var compactum alba x 2, Dendrobium taylorii, Epidendrum porpax, Holcoglossum kimballianum x 2, Maxillaria acervata, Micropera fuscolutea x 2, Micropera pallida, Miltonia regnellii var alba, Miltonia regnellii x 2, Paphiopedilum henryanum, Phalaenopsis bellina x 3, Phalaenopsis cornu-cervi, Phalaenopsis hieroglyphica f. flava, Psygmorchis pusilla, Restrepia brachypus, Robiquetia aberrans x 3, Trichoglottis subviolacea, Vanda coerulea, Vanda denisoniana, Vanda falcata x 2, Vanda lamellata, Vanda merrillii, Vanda sanderiana, Vanda spathulata, Zootrophion atropurpureum

Nambour Orchid Society Information and Contacts

Business meeting

Is held on the 4th Saturday of each month at 12.45pm prior to the cultural meeting. All members are welcome to attend.

Cultural meeting

Is held on the 4th Saturday of the month at the Nambour Uniting Church Hall, Coronation Ave., Nambour at 2pm. All members and visitors are welcome.

Plants are to be tabled by 1.30pm for judging.

The Species Appreciation Group get together is held monthly from February to November at member's homes. Contact the Secretary for details.

All STOCQ members welcome. Bring your flowering species plants, a chair, a cup and a plate to share for afternoon tea

Treasurer	Jean Harris	07 5445 3307	
Editor	Richard Hand	07 5442 2879	rhand39@gmail,com

A reminder for all winners of Judges Choice, cultural awards etc. at both our meetings, please send a few lines on how you grow your plants, growing conditions and anything relevant, for inclusion in the Newsletter to -rhand39@gmail.com. Information is required two weeks prior to the monthly meeting

Our new shirts are available to Order. If you would like one, please Email or see Alison at the meeting. Cost to members is \$25 for the shirt with logo + \$5.50 if you require a pocket.

Name badges are also available to order. Cost is \$5.00 new members or \$10.95 if you require a replacement.

FOR SALE

Nambour Orchid Society members may use space in the Newsletter free of charge, if you have any Orchid related items for sale, please send your ad to rhand39@gmail.com no later than 2 weeks prior to the monthly meeting

Members can sell Orchids or foliage plants at our meetings. Only plants that we would use in show displays are permitted. Please remember to add your gold coin donation to the honesty box.
